CORE COMPETENCIES

- User Interface Design
- Software Development Life Cycle
- Agile Methodologies
- Front-end Development
- Back-end Development
- Web Application Development
- Performance Optimization Techniques
- Cross-Platform Optimization
- User Experience Enhancement

TECHNICAL SKILLS

- HTML5
- CSS3
- Bootstrap
- React.js
- Next.js
- JavaScript (ES6+)
- TypeScript
- Tailwind CSS
- SCSS
- Material UI
- Redux
- Redux Saga
- Git/GitHub

EDUCATION

- **BE (Electronics & Communication)** from Sri Sairam Engineering College in 2022, Chennai India.
- 11th & 12th (Computer Science) from Sai matriculation higher secondary school in 2018, Chennai, India.

PERSONAL DETAILS

DOB: 27th January 2000
Languages Known: English & Tamil
Address: Chennai, 600129 Tamil

SATHISH G

Software Development Portfolio | GitHub | LinkedIn

Aspiring professional with a focus on creating innovative **web applications**. Targeting opportunities in **Web application development, Front-end Development** and **User Interface** design, to drive technological advancements.

PROFILE SUMMARY

- A focused professional with **2.4 years** in Software Development, focusing on the design and implementation of robust **web applications**.
- Currently working as, a **Digital Transformation Engineer** at Ideassion Technology Solutions, focusing in the creating and up keeping of a multi-tenant platform.
- Skilled in various programming languages and frameworks, such as **TypeScript, Next.js, and JavaScript.**
- Expert in Front-end Development with React.js and UI/UX design, combining a strong proficiency in creating responsive and interactive user interfaces.
- Expertise in contemporary web technologies and design methodologies to develop applications that are both maintainable and scalable, thereby ensuring their sustainability over time.
- Exhibited exceptional problem-solving skills and proficient communication capabilities, promoted teamwork and ensured that project objectives are met in a collaborative environment.
- Design the aesthetics to be implemented within a website or product, from the layout menus and drop-down options to colors and fonts.

CERTIFICATIONS

- Full stack web development from GREENS Technologies in 2023.

WORK EXPERIENCE

Digital Transformation Engineer | Ideassion Technology Solutions | Chennai
Oct'24-Present

Project: **Ackumen**
Client: Buckman
Description:
Buckman, a global chemical solutions provider, leverages smart technology and advanced data analysis to enhance operational efficiency and sustainability. As part of Buckman's digital transformation, the **Ackumen Site Inventory Module** was built to manage and track chemical container inventory across various locations.
One of the key features developed was **Container Aggregation**, aimed at grouping container data intelligently based on product characteristics to support efficient inventory management and reporting.

Key Responsibilities & Features:

- Developed the **Container Aggregation** functionality to group containers based on **Product Name**, improving data organization and user comprehension.
- Built dynamic and interactive data tables with expandable views using **Material UI's DataGrid Premium** to support parent-child row structures.
- Integrated monthly aggregated data into the **"My Reports"** module to facilitate report generation and export.
- Implemented dynamic row expansion, selection handling, and conditional rendering to enhance user control over aggregation.
- Ensured performance optimization while dealing with large, nested datasets.
- Coordinated closely with QA and backend teams to validate API responses and data formatting.

Project: Valam – ERP by Ideassion
Description: Valam is a comprehensive Enterprise Resource Planning (ERP) application developed to streamline and automate core business processes such as sales, purchases, lead tracking, and reporting. The platform provides user-friendly interfaces for managing workflows across departments with robust state management and routing capabilities.
Tools Used: React.js, React Router, Redux, Redux-Saga, HTML5, CSS3, JavaScript, REST APIs

Key Result Areas:

- Developed and maintained dynamic user interfaces using **React.js** and **React Router** for seamless page navigation.
- Implemented **Redux** for global state management to ensure consistency across complex data flows.
- Integrated **Redux-Saga** as middleware to handle asynchronous actions like API requests and data fetching.
- Built reusable and modular components to support features like:
- Ensured responsiveness and accessibility across various devices and browsers.
- Collaborated with backend teams to consume RESTful APIs and integrate dynamic data.

Software Developer | Phantom Solutions | Chennai
Aug'23 – Sep'24

Project: ESYGO
Client: ESYGO – Choose the right power
Description: EV Charging Application that streamlines the integration of charging stations, devices, coupons, and third-party stations. It supports diverse roles – operator, technician, and admin, ensuring comprehensive role-based functionality.
Tools Used: React.js, React Router, Material UI, Redux Toolkit, Google Maps, Styled Components, Vite, Node.js, Mongo dB

Key Result Areas:

- Created interfaces for the onboarding and administration of charging stations, devices, coupons, and third-party stations.
- Established role-based access **control (RBAC)** to regulate permissions for operators, technicians, and administrators.
- Developed dashboards to deliver actionable insights and analytics tailored to different user roles.
- **Incorporated Google Maps Places** Autocomplete to enhance the capabilities of the location search.
- Partnered with **UI/UX** designers to ensure technical implementation aligned with design requirements and feasibility.
